IG CHINA 2025 International Gas Exhibition came to a successful conclusion, setting a new record in previous exhibitions.

IG CHINA 2025 International Gas Exhibition came to a successful conclusion, setting a new record in previous exhibitions.

From June 18-20, 2025, Hangzhou Grand Convention and Exhibition Center became the focus of global gas industry. IG CHINA 2025 International Gas Exhibition was grandly held and successfully concluded here. This exhibition, with its grand scale, rich activities and profound industry discussions, has broken the records of previous sessions and built a high-standard and high-efficiency communication platform for global gas industry cooperation.

500 guests from home and abroad gathered together, and the exhibition scale of 30,000 square meters set a new record:

At opening ceremony, 500 domestic and foreign guests gathered together and witnessed the grand event in this industry. Among them, the presence of leaders from 10 overseas gas industry associations and 300 entrepreneurs added strong international atmosphere to the exhibition. Over 200 enterprises from home and abroad participated in the exhibition and exhibition scale reached 30,000 square meters. It covered two core areas of Exhibition Hall No. 2 and Hall No.3, and comprehensively presented new equipment, new technologies and new applications of the entire industrial gas industry chain.

In Exhibition Hall No.2, a variety of equipment for entire gas production process are on display. Advanced technologies and equipment were all on display, such as Cryogenic Separation, Pressure Swing Adsorption, Membrane Separation, LNG Plant and Seawater Electrolysis for Hydrogen Production. Gas production auxiliary equipment and materials, gas products, gas analyzers and gas detection equipment are all on display. It has demonstrated China's strong strength and innovative capabilities in the field of gas production.

Hall 3 focuses on gas storage and transport, automatic filling, pressure vessels and related supporting equipment. This includes storage devices like cryogenic tanks for industrial gases, LNG storage tanks, gas cylinders, and Dewar flasks. It also covers auxiliary equipment such as cryogenic pumps, vacuum pumps, and vaporizers. Furthermore, it showcases gas information management technology, such as cylinder safety management software, electronic tags (RFID), and the Internet of Things (IoT). It reflects the development trend of the gas industry in terms of intelligentization and informatization.

During the grand opening ceremony, the highly anticipated "Map of China's Gas Industry Chain Agglomeration Zones" was officially released.

This meticulously crafted industry map serves as a navigational platform for the first batch of 100 carefully selected target enterprises and their innovative products, facilitating precise matchmaking with the international market. It provides overseas guests and professional buyers with comprehensive and intuitive information on the layout of China's gas industry chain, thus becoming a vital bridge for promoting international cooperation.

“IG People” Salute to the strivers of China's gas industry

Meanwhile, “IG People: Biographies of Notables in China's Gas Industry”, which was edited and published, also made its debut at the exhibition. The book vividly documents the development history of China's gas industry through the innovative spirit and entrepreneurial stories of industry veterans and newcomers. It also serves as a tribute to the numerous professionals who have contributed to the industry's growth, and it generated a strong response at the exhibition.

“Indonesian National Theme Day”Analyze market opportunities

“Indonesian National Theme Day” was a major highlight of the exhibition. Mr. BER-LINTO, Consul General of the Republic of Indonesia in Shanghai attended the event in person. Representing the Indonesian government, he provided a detailed introduction to Indonesia's economic development and relevant policies for both Chinese and international exhibitors and trade visitors. He particularly highlighted the investment policies that encourage Chinese enterprises to participate in Indonesia's economic and industrial development. Mr. RACHMAT, the Chairman of Indonesia Industrial Gas Association, also gave an in-depth analysis of the current state of Indonesia's gas industry and its market opportunities. His detailed information and precise analysis provided valuable market insights for exhibitors and attendees, enhanced mutual understanding between the Chinese and Indonesian gas industries, and laid a solid foundation for future cooperation.

“The Night of IG People”promotes exchanges between China and Foreign Countries.

During the exhibition, “The Night of IG People”strengthened interaction and exchanges among senior executives from Chinese and foreign enterprises. By leveraging the resources of the industry association, [the event/platform] facilitated technology and business matching between different countries, while also highlighting the essence of national cultural exchange, thereby creating a positive atmosphere for international cooperation in the global gas industry.

The industry conference explores pathways to sustainable development.

“2025 High-quality Development Conference in Industrial Gases” attracted numerous industry professionals to participate in. At the conference, participants collectively explored industrial cross-sector integration and technological innovation, tight collaborative innovation mechanisms, market opportunities, and sustainable development pathways for the industrial gas industry under the "dual carbon" goals. A macro analysis of how China's electronic specialty gases will be "like a shadow" to the IC industry, combined with an observation from an international perspective based on market introductions in various countries (such as Indonesia, South Korea, India, Malaysia, and the Middle East), provided new ideas for the industry's development.

“High-level dialogue calls on industry-wide collaborative innovation.

During the high-level dialogue, participants conducted an in-depth discussion on green transition and global cooperation, unanimously agreeing that international cooperation and synergy across the industrial chain are key to breaking through technological bottlenecks and achieving cost reduction and efficiency gains. It called on the industry to strengthen collaborative innovation and promote high-end, intelligent, and green transformation to meet the challenges and seize the opportunities facing the global gas industry.

Overseas buyers actively participated and the exhibition yielded fruitful results

On the final day of the exhibition, June 20th, overseas professional buyers were actively involved and arrived in a continuous stream to the venue. They were looking for potential partners, placing orders with suppliers, discussing cooperation, and arranging factory visits. IG CHINA 2025 International Gas Exhibition was a great success for both Chinese and international exhibitors and buyers. Everyone expressed their anticipation for next year's event to continue promoting communication and development within the global gas industry.
